

Tavishi Session 25

Sunday, July 26, 2026 8:28 PM

Basics

- Variables ✓
- Data Types ✓
- Type Conversion ✓
- Input and Output ✓
- Comments ✓
- Operators ✓

Control Flow

- if ✓
- if-else ✓
- if-elif-else ✓
- Nested Conditions ✓
- Match Case (optional) ✓

Loops

- for Loop ✓
- while Loop ✓
- Nested Loops ✓
- Loop Control Statements (break, continue, pass) ✓

Strings

- String Indexing ✓
- String Slicing ✓
- String Methods ✓
- String Formatting ✓

Collections

- Lists **List Methods** ✓
- Tuples **Tuple Operations** ✓
- Sets **Set Methods** ✓
- Dictionaries **Dictionary Methods** ✓

Functions

- Function Definition
- Parameters and Arguments
- Return Statement
- Keyword Arguments
- Lambda Functions

Dictionary :-

Name	Marks
Tavishi	85
Aizaan	60
Anuj	67
Ananya	89

mapping name
with marks

➤ We used dictionary where we need mapping like name mapped with respective no.

➤ Dictionary is the collection of key value pair.

List = Collection of similar & different data types.

```
name = ["Azaan", "Tavish"]
```

Python → methods

```
print(len(name))
```
